

PRECISION CONCRETE FLOOR TREATMENT

HIGH-BAY WAREHOUSE GRINDING

GM22 | Precision grinding of VNA aisles

Floor accuracy for demanding warehouse logistics

With the GM22 robotic machine, we correct height deviations on concrete warehouse aisles. We plan the work based on flatness measurements and the requirements of the storage equipment.

01 FLOOR FLATNESS ANALYSIS

Measurements of the longitudinal and transverse profile and identification of areas requiring correction.

02 PRECISION ROBOTIC GRINDING

Targeted processing with the GM22 and controlled removal of raised sections of the surface.

03 RESULT VERIFICATION

Control measurements after grinding and evaluation of flatness against the agreed project requirements.

GRINDING OF ALL TYPES OF INDUSTRIAL FLOORS

Grinding of all types of industrial floors to the highest standards of quality and precision.

Floor flatness requirements: DIN 15185 / VDMA
